

The attached figures show the 'WA 2' tree and various aspects of its fruit. FIG. 1 is a photo of the eight year old originally budded tree of 'WA 2'. FIG. 2 is a close up of the apples at harvest maturity on the originally budded tree. FIG. 3 shows representative views of the exposed and backsides of the 'WA 2' fruit, in addition to the stem and calyx ends of the fruit. FIG. 4 shows the 'WA 2' fruit as compared to the fruit of its two parental varieties at harvest maturity. A typical 'Ten-

roy Gala' apple, suspected of being the male parent cultivar, and a typical 'Splendour' apple, are shown next to a 'WA 2' apple.

What is claimed:

1. A new and distinct apple tree variety named 'WA 2', as herein shown and described.
